Actividad 1: Variables Kotlin

Código con errores

The screenshot shows the Kotlin Playground interface. The code in the editor is as follows:

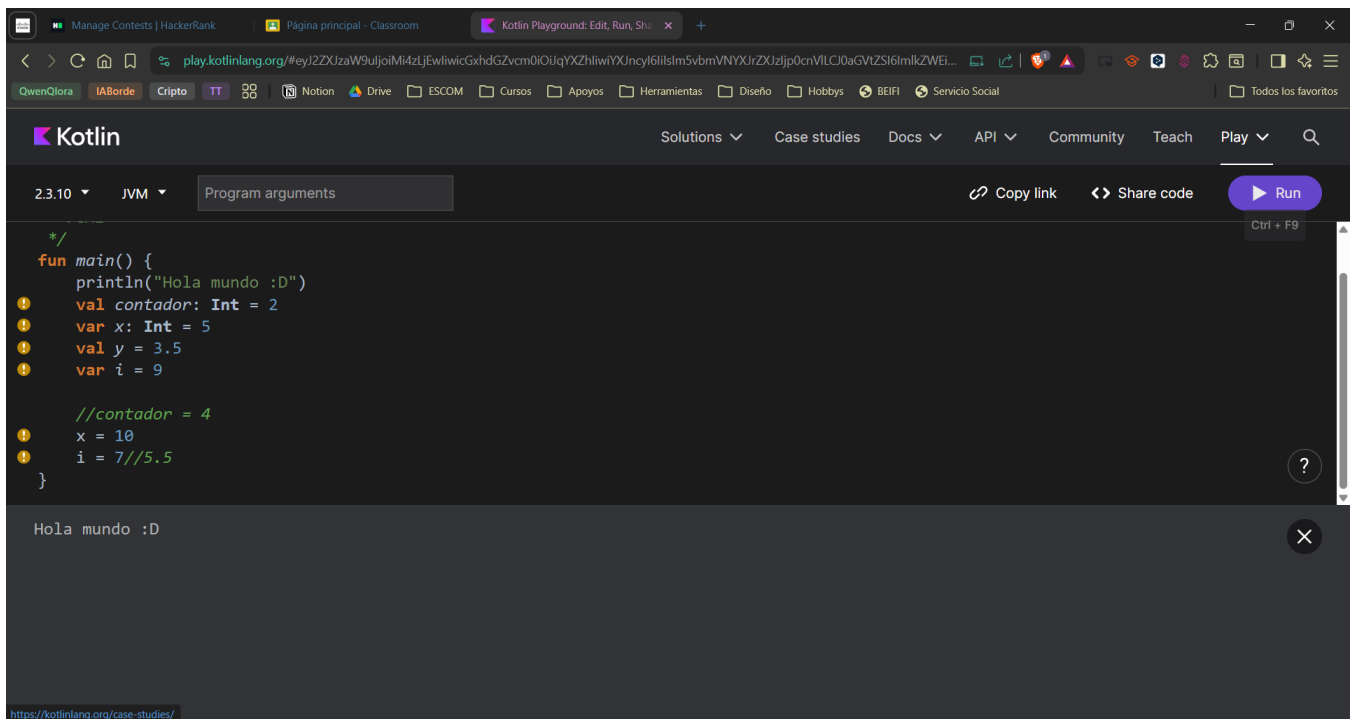

```
/**
 * Areli Alejandra Guevara Badillo
 * 7CMI
 */
fun main() {
    println("Hola mundo :D")
    val contador: Int = 2
    var x: Int = 5
    val y = 3.5
    var i = 9

    contador = 4
}
```

Below the code, two error messages are displayed:

- 'val' cannot be reassigned.
- Assignment type mismatch: actual type is 'Double', but 'Int' was expected.

Código sin errores

The screenshot shows the Kotlin Playground interface with the following code:

```
/**
 */
fun main() {
    println("Hola mundo :D")
    val contador: Int = 2
    var x: Int = 5
    val y = 3.5
    var i = 9

    //contador = 4
    x = 10
    i = 7//5.5
}
```

The output of the program is displayed at the bottom:

```
Hola mundo :D
```
